

Contribution of the volunteers to the CBA Project

Project Activities (to which persons plan to contribute on a voluntary basis)	Description of the voluntary contribution (capacities, knowledge, know-how, manual labor, materials, tools, etc.)	Total number of volunteers to be mobilized	<i>Women</i>	<i>Men</i>	<i>Elderly persons (older than 60)</i>	<i>Youth (younger than 25)</i>	<i>People with disabilities</i>	<i>Local</i>	<i>National</i>	<i>International</i>	Number of volunteer days anticipated	Monetary value of the voluntary contribution including labor and materials (enter as co-financing in the budget)
Alternative livelihood practices (greenhouse farming)	Technical knowledge, know-how, manual labour, materials & tools	30	12	14	3		1				60	CDN\$3,646.82
Soil conservation (pineapple barriers on individual farms)	Technical knowledge, manual labour, materials & tools	40	13	11	9	3					80	CDN\$1,297.16
Agroforestry	Technical knowledge, manual labour, materials & tools	40	13	11	9	3					80	CDN\$1,740.00

For reference: What are the mechanisms for volunteerism that already exist in the community before the CBA project (for example, traditional mechanisms for mutual assistance, associations, etc.)?

The presence of Farmers Association(s) and the practice of shared labour among farmers within the community and within the Farmers Association.

For reference: Number of volunteers in the community already engaged in climate change adaptation activities before the CBA project.

For reference: What are the opportunities or obstacles that could facilitate or impede people from engaging in voluntary activities?

The major obstacles to impede voluntary activities would be personal economic challenges, especially in relation to travelling to the site. The major opportunity is the recognition within members of the need for the development of capacity and the willingness to employ the learnt techniques in a practical way.
